

Dear Colleague,

Please kindly note that the Myo Fix set will include a new mask (step 5). Please read all information carefully before proceeding with the treatment.

What's new about the mask?

1. A new form: we use elastic-stretch woven fabric soaked in matrix gel containing active substances. Now the mask covers the entire face and the chin, providing an additional lifting effect for the lower third of the face. The skin is deeply hydrated and the activity of mimic muscles is significantly decreased.

2. A new composition: with the development of biotechnology, we were able to enhance the composition of the matrix gel and include a number of new active ingredients in high concentrations.

3. A new way to apply: put the closed sachet with a mask in a bowl with hot water (50-60° C) before applying the Fixing Concentrate (step 4). Apply the Fixing Concentrate as usual, open the sachet and carefully expand the mask, placing it on the client's face. Fix the top slot on the ears, straighten the stretched material, then secure the lower part of the mask on the face and chin and put the lower slots on the client's ears over the top slots. Put wet cotton pads on the eyes, you can also use warming or cooling masks to improve the comfort. As usual, total relaxation is required while the mask is applied. Remove the mask after 20 minutes. A light drainage massage can be performed with the leftovers of the gel. Follow with the Lifting Cream (step 6).

It is possible to combine this treatment with ultrasound lifting. The ultrasound treatment can be performed on the fabric or on the gel left after removing the mask – the gel has conductive properties with a negative charge.

It is also possible to use iontophoresis. The treatment should be performed on the fabric or on the gel left after removing the mask

What are the benefits of the new mask?

1. The effect of reducing the activity of mimic muscles is more pronounced.

The "frozen face" effect persists for a few hours after the treatment, which is positively perceived by clients and allows for a more pronounced effect of blocking neuromuscular activity in the main areas of correction (the eyes, forehead, nose, nasolabial folds)

2. The effect is more global.

In addition to local wrinkle correction, the mask provides a deep moisturising effect, tightens pores, lightens pigmentation and has a more pronounced effect of lifting and smoothing the complexion.

3. More opportunities for professionals.

It is now possible to add ultrasound or iontophoresis lifting treatment (gel is a conductor, negatively charged) during the mask treatment. It is also possible to perform drainage massage, ultrasound drainage or iontophoresis treatment on the gel left after removing the mask.

The composition of the new mask

<i>Acetyl Hexapeptide-3</i>	Breaks up the neuromuscular transmission when trying to contract the facial muscles. Correction of wrinkles.
<i>Palmitoyl Tetrapeptide-7</i>	Reduces the production of interleukins, which are the triggers of inflammation. Powerful antioxidant effect and increased synthesis of collagen and elastin. Fills wrinkles and improves skin tone.
<i>Palmitoyl Tripeptide-1</i>	Increases production of growth factors of the dermis and epidermis. A noticeable increase in the synthesis of collagen and elastin, and hyaluronic acid. Fills wrinkles and improves skin tone.
<i>Nonapeptide-1</i>	Mimics the epidermal growth factor of human skin, reduces the production of melanin. Fills wrinkles, improves skin tone and has a brightening effect.
<i>Skinasensil (Acetyl Tetrapeptide 15)</i>	Reduces the synthesis of prostaglandins and interleukins. Has a soothing, anti-inflammatory and vessel strengthening effect.
<i>Hyaluronic Acid</i>	Skin's natural moisturising agent, restores hydration levels.
<i>Glycerin</i>	Deep and superficial hydration of the skin.

We hope that you will appreciate the new opportunities for reducing wrinkles with Meder Beauty Science and that it will make your work even more successful!
